視訊會議網址：<https://reurl.cc/67GLpd>

Happy New Year

演講摘要：

Generative AI is a transformative technology that fundamentally changes how we utilize digital technologies. This presentation will shed light on generative large language models (LLMs), explaining their ability to generate text for various tasks, including code for software programming and hardware design. Additionally, it will discuss debates surrounding LLMs, such as whether they can be considered a "stochastic parrot" or a "blurry JPEG of the Web". The presentation will also cover topics such as domain-specific foundation models, AI safety and trustworthiness, malicious attacks on models and data, AI-powered protection against plagiarism of content creators' work, and emerging computing architectures for generative AI.

講者：

- Member of Academia Sinica, NAE
- Co-Founder of Taiwan AI Academy
- William H. Gates Professor of Computer Science and Electrical Engineering at Harvard University
